

Dynamic Design

ECU1 :

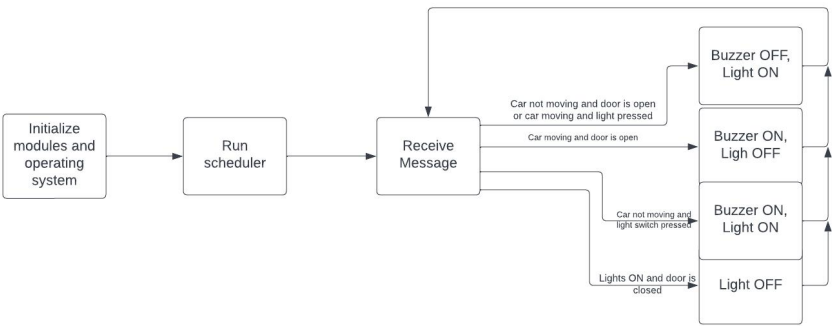

State Machine:

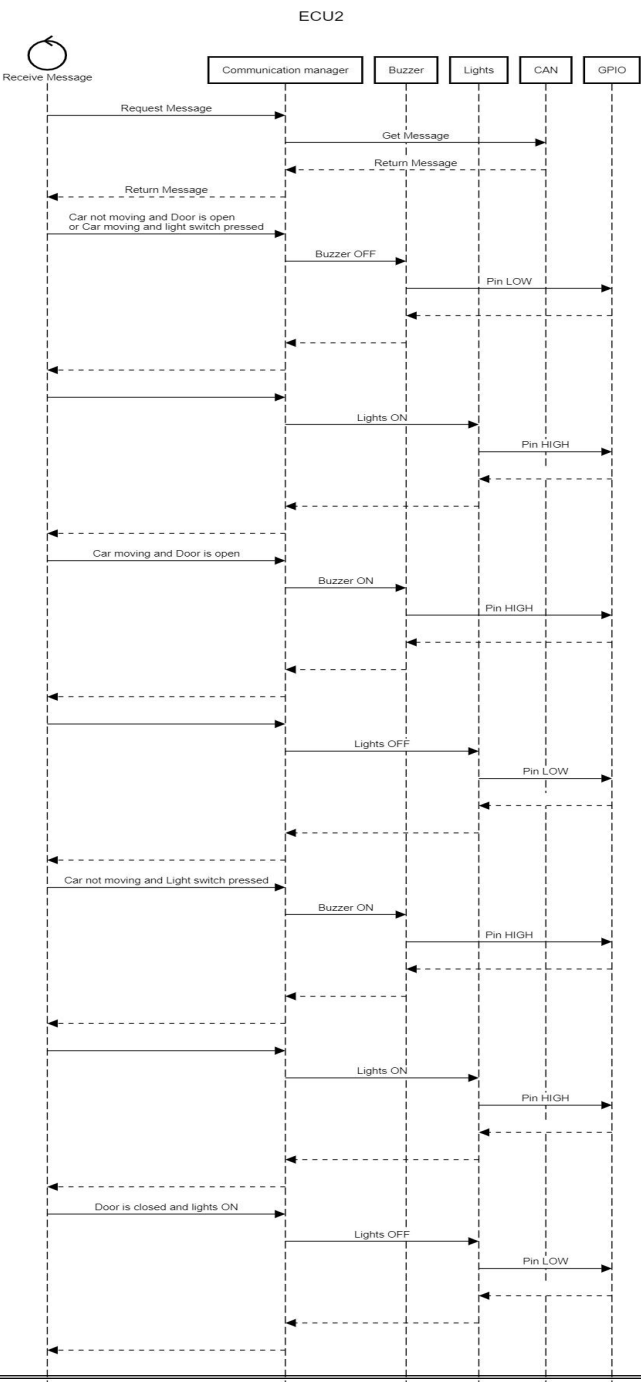

Sequence Diagram:

ECU 2:
State machine:

Sequence Diagram:

CPU Load:

ECU 1:

This ECU has 3 periodic tasks, we can estimate the execution time by 100 us for each task.

$$\text{Therefore, CPU Load} = \frac{100\mu s * 1 + 100\mu s * 2 + 100\mu s * 4}{20ms} = 3.5\%$$

ECU2:

ECU 2 has only one periodic task which is receiving messages, the execution time can be estimated to 100 us.

$$\text{Therefore, CPU Load} = \frac{100\mu s * 1}{5ms} = 2\%$$
